

PROGRESSING TOWARDS PIVOTAL TRIALS IN EATING DISORDERS

Financial highlights

H1 2019 (H1 2018)

- Net revenues were SEK 2.4 M (8.1 M)
- EBIT was SEK -49.7 (-39.9 M)
- Net profit/loss was SEK -44.6 M (-33.0)
- Earnings per share were SEK -1.89 (-1.51)
- Diluted earnings per share were SEK -1.89 (-1.51)

Q2 2019 (Q2 2018)

- Net revenues were SEK 0.7 M (3.8 M)
- EBIT was SEK -20.6 M (-24.2 M)
- Net profit/loss was SEK -19.8 (-19.6 M)
- Earnings per share were SEK -0.83 (-0.89)
- Diluted earnings per share were SEK -0.83 (-0.89)

Business highlights in Q2 2019

- Saniona completed a Rights Issue providing Saniona with gross proceeds of SEK 66.5 million, which was paid in after the balance sheet date. The rights issue secures Saniona's near term financing requirements and enables the company to complete the ongoing Phase 2a studies with Tesomet for the treatment of Prader-Willi syndrome and hypothalamic obesity and initiate discussions with regulatory agencies for start of Phase 2b/3 studies in 2020.
- Saniona established a Scientific Advisory Board for the development of Tesomet in PWS.
- In May, the annual shareholders' meeting resolved to elect Ed Salzman as new ordinary Board member.

Significant events after the reporting period

- Saniona selected a development candidate, SAN903, in the IK program. Based on work done to date, Saniona has elected to focus SAN903 initially on the treatment of Crohn's disease and colitis. The program may potentially be ready for Phase 1 clinical studies within 18 months.
- in July Saniona received the gross proceeds of SEK 66.5 million from the Rights Issue. The net proceeds after transaction costs is SEK 53.7 million. The number of shares outstanding after the Rights Issue is 27,763,347.

Comments from the CEO

"It is an exciting period in the development of the company and our pipeline is advancing apace. Our most advanced program, tesofensine, is expected to be launched next year for obesity and we are now completing exploratory clinical efficacy and dose finding studies of our key asset, Tesomet, in the rare eating disorder Prader Willy Syndrome. In parallel, our study with Tesomet in hypothalamic obesity is progressing well," says Jørgen Drejer, CEO of Saniona.

For more information, please contact

Thomas Feldthus, EVP and CFO, Saniona, Mobile: +45 2210 9957, E-mail: tf@saniona.com

Letter from the CEO

“It is an exciting period in the development of the company and our pipeline is advancing apace. Most importantly, we are now completing exploratory clinical efficacy and dose finding studies of Tesomet in the rare eating disorder Prader Willy Syndrome (PWS). In parallel, our study in hypothalamic obesity is advancing well.

Preparation are ongoing for the next important steps involving potential initiation of pivotal clinical Phase 2b/3 studies in 2020 in these indications. As a critical component of these plans, in June we secured a financing round with gross proceeds of SEK 66.5 million as a rights issue.

We are looking forward to results of a dose-finding Phase 2a study of Tesomet in adolescent patients with PWS. The last patient visit was at the end of July, all blood samples have been shipped for analysis and the clinical team is in the process of validation and closing the data base. We expect that the last data will be available for analysis by the end of August and that we can announce the results in September. A second Phase 2a study of Tesomet in hypothalamic obesity, another rare eating disorder, is also progressing well and the standard dose for obese patients appears to be well tolerated in this trial.

Our Mexican partner Medix has successfully completed a Phase 3 registration trial for our most advanced product tesofensine in obesity, demonstrating that it is safe, well tolerated and achieved significant weight loss in obese people. Medix will meet with the Mexican regulatory agency in Q3 2019 and is planning to launch the product in 2020. Following market approval in Mexico, Saniona will be eligible for royalties on all product sales.

Our early-stage pipeline is also progressing well. Our partner Boehringer Ingelheim has disclosed the target – GABA alpha-5 – under our collaboration program for schizophrenia and has presented the first data at a conference in Japan. Furthermore, we are currently in the process of filing for a Clinical Trial Authorization (CTA) for SAN711 for itching and neuropathic pain. We have selected a development candidate, SAN903, under the IK program. SAN903 is a novel proprietary IK channel inhibitor that effectively dampens gut inflammation in animal models, and we are now initiating formal pre-clinical development, which may lead to the start of Phase 1 studies aiming at the indication inflammatory bowel disease (IBD).

We have also strengthened the Saniona organization, notably by establishing a Scientific Advisory Board (SAB) for Tesomet in PWS comprising several highly regarded experts from the U.S. and Europe with a profound experience in the disease. I would like to take this opportunity to thank the SAB members – Tony Holland, MD, CBE; Theresa Strong, PhD; Janice Forster, MD; and Susanne Blichfeldt, MD – for sharing their expertise and contributing to the successful development of Tesomet. The SAB is already making valuable contributions, reviewing our clinical plans and providing advice regarding preparations for the Phase 2b and Phase 3 meetings with the U.S. Food and Drug Administration (FDA) and European Medicines Agency (EMA) planned for later this year.

The Annual General Meeting (AGM) elected Edward C. Salzman as a new member of the Board of Directors, bringing his extensive strategic and commercial experience within rapidly growing biotechnology companies to Saniona. Edward is Executive Chairman of Cello Health BioConsulting (previously Defined Health), a leading strategic business development advisory firm that has been serving the pharmaceutical, biotech and healthcare investment industries for more than 25 years.

Saniona has continued to deliver on its business priorities in the second quarter. After the recent funding, we are well placed to further advance our two leading product candidates towards market approval. We look forward to keeping you up to date as we continue to progress the company over the coming busy months”

Jørgen Drejer

CEO, Saniona AB

About Saniona

Saniona is a research and development company focused on drugs for diseases of the central nervous system and eating disorders with five programs in clinical development. Saniona intends to develop and commercialize treatments for orphan indications such as Prader-Willi syndrome and hypothalamic obesity on its own. The research is focused on ion channels and the company has a broad portfolio of research programs. Saniona has partnerships with Boehringer Ingelheim GmbH, Productos Medix, S.A de S.V and Cadent Therapeutics. Saniona is based in Copenhagen, Denmark, and the company's shares are listed at Nasdaq Stockholm Small Cap (OMX: SANION).

Vision and objective

Saniona aims to be a leading biotech company focusing on treatment of eating disorders and diseases of the central nervous system. Saniona's overall objective is to develop - both in-house and together with partners - new treatments that address significant unmet medical needs.

Strategy and business model

Saniona has a broad product pipeline, which is developed both internally and in collaboration with pharmaceutical companies.

Strategically, the company intends to develop and commercialize treatments for orphan indications on its own and engage in partnerships with larger pharmaceutical companies for development programs aiming at treating large indications such as obesity.

Saniona is developing products internally with the aim of attaining market approval itself in the U.S. and Europe for certain orphan indications where the required investments are limited, and the commercial opportunities can be highly attractive. For example, Saniona is currently developing Tesomet for Prader-Willi syndrome and hypothalamic obesity in the U.S. and Europe. The required investments for developing Tesomet in these indications are comparatively small, while the required commercial infrastructure for servicing these patients in the U.S. and Europe is manageable.

In addition to this, Saniona has entered into and will engage in research collaborations with pharmaceutical companies or is developing products internally with the aim of entering into a collaboration with a pharmaceutical company at a later stage. The structure of Saniona's collaboration agreements depends on the product, the indication, the investment and the risk, as well as the interest and capabilities of Saniona's partners. Saniona can either grant its partners commercial license to a limited territory or globally. In exchange, the partners typically finance future research and development activities and pay Saniona upfront payments, research funding, milestone payments and royalties on product sales when the product candidates are commercialized.

Saniona's short term strategic priorities are set-out below:

- To develop and attain market approval for Tesomet in the U.S. and Europe in orphan diseases by ourselves
- To develop Tesomet in rest of the world through partnerships for metabolic diseases
- To attain market approval for tesofensine in collaboration with Medix in Mexico and Argentina
- To develop at least one drug candidate internally from our unique ion channel research platform
- To leverage our leading position within ion channel research in partnership with pharmaceutical companies

Project portfolio

Saniona has five programs in clinical development including three late stage clinical programs focused on the development of treatments to effectively regulate obsessions, cravings and addictions related to food and drugs. In total, the company has a portfolio of nine active drug programs in clinical and pre-clinical development stages, of which four are financed through partnerships or grants.

Clinical programs

Saniona's most advanced program is tesofensine, which is being developed for obesity in collaboration with Medix. Medix has completed a Phase 3 registration trial for tesofensine in December 2018 and expects to file a new drug application in 2019 for treatment of obesity in Mexico with potential market approval and launch in 2020. Medix holds an exclusive license to commercialize tesofensine in Mexico and Argentina, while Saniona is entitled to milestone payments and royalties on product sales. Saniona retains commercial rights in the rest of the world and rights to use any data generated in the Phase 3 trial.

Tesomet is Saniona's most advanced internal program and is being developed for the treatment of eating disorders. Saniona is currently conducting a dose-finding Phase 2a study in PWS and a Phase 2a proof-of-

concept study in HO. The objective is to prepare Tesomet for pivotal Phase 2b/3 studies in at least one of the two indications and start pivotal studies in 2020.

The University of Pennsylvania Treatment Research Center (TRC) is conducting an investigator-initiated Phase 2a proof-of-concept study with NS2359 for the treatment of cocaine addiction. The study is financed through grants and Saniona retains commercial rights to the compound and the clinical data developed by TRC.

Saniona's partner Cadent Therapeutics has initiated a Phase 2a study for the treatment of essential tremor and expects to start another Phase 2a study in the second half of 2019 for the treatment of Ataxia. Saniona holds an ownership stake in Cadent and will receive royalties on CAD-1883 if and when it reaches the market.

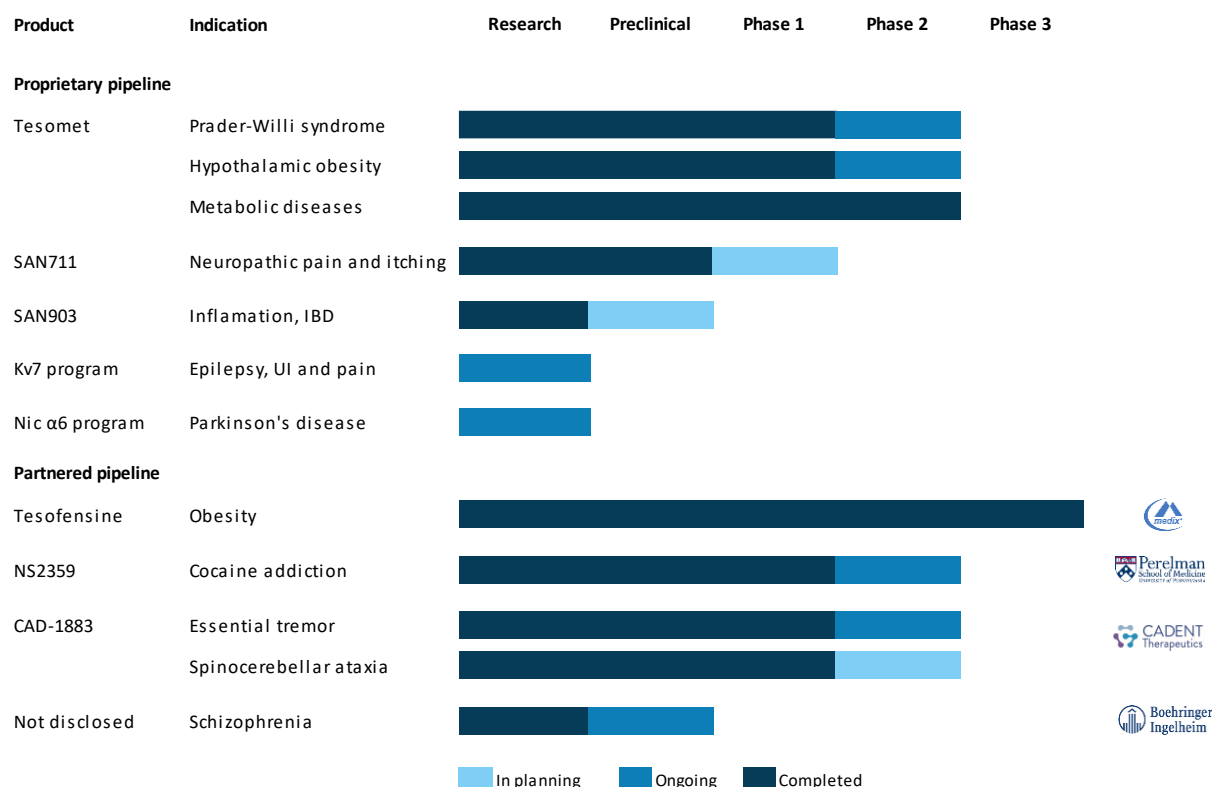

Saniona has completed the preclinical development of SAN711 for the treatment of chronic itching and neuropathic pain. The program is ready for Phase 1 either internally or together with a potential partner.

Research programs

Saniona's early stage pipeline is based on its ion channel platform with well-established targets for drug discovery. Ion channels comprise a unique class of proteins, which, among other things, controls the activity of muscles and nerves and is central to numerous other functions in the body.

Saniona currently has four pre-clinical programs of which one program is financed by its partner Boehringer Ingelheim. Boehringer Ingelheim is currently conducting a preclinical development program in preparation for Phase 1 studies in schizophrenia. Furthermore, Saniona has initiated preclinical development for SAN903 in preparation for Phase 1 studies in IBD. Finally, Saniona's two internal research programs, which are targeting the Kv7 and Nicotinic $\alpha 6$ ion channels, are focused on the treatment of certain neurological diseases including epilepsy and Parkinson's diseases.

Saniona's pipeline is set out below.

Market

Saniona's ongoing programs address significant market segments:

Target/Program	Indication	Market estimate
Tesomet	Prader-Willi syndrome Hypothalamic obesity	- Orphan indication > USD 1 billion ¹ - Orphan indication > USD 1 billion ²
Tesofensine	Obesity	- USD 250 million in Mexico ³
NS2359	Cocaine addiction	> USD 1.8 billion ⁴
SAN711	Neuropathic pain	> USD 6 billion ⁵
Boehringer Ingelheim program	Schizophrenia	> USD 4.8 billion ⁶
SAN903	Inflammatory bowel disease	> USD 5.9 billion ⁷
Nic-α6 program	Parkinson's disease	> USD 2.8 billion ⁸
Kv7 program	Pain, epilepsy, Urinary Incontinence	> USD 6 billion ⁵
Cadent Therapeutic program	Ataxia Essential tremor	- Orphan indication NA

Apart from orphan indications such as Prader-Willi syndrome and hypothalamic obesity, where Saniona may develop and commercialize Tesomet on its own, Saniona will aim to partner with major pharmaceutical companies for purchasing, developing and commercializing projects from Saniona's pipeline of preclinical and clinical drug candidates.

There is a significant need for new and innovative products for the pharmaceutical companies, which often have a limited number of products in their pipelines. Therefore, the market for out-licensing of new, innovative pharmaceutical projects and product programs are considered attractive. Importantly, within the field of ion channels, there are relatively few biotech companies supplying major pharmaceutical companies with research and development projects. Combined, this is creating interesting business opportunities for Saniona.

¹ Financial analysts estimate that there is 20 - 30,000 PWS patients in the US and Europe collectively and that the obtainable average price level is USD 60,000 – 150,000 per patient per year, Nordea Markets, Redeye, Jarl Securities, Leerink, JMP Securities, Canaccord Genuity, SunTrust Robinson Humphrey

² Financial analysts estimate that the market for hypothalamic obesity is 30-50% of the market for PWS due to fewer patients, see above

Definitions and relevance of alternative performance measures

Saniona presents certain financial measures in the interim report that are not defined according to IFRS, so called alternative performance measures. These have been noted with an "*" in the table above. The company considers that these measures provide valuable supplementary information for investors and company management as they enable an assessment of relevant trends of the company's performance. These financial measures should not be regarded as substitutes for measures defined per IFRS. Since not all companies calculate financial measures in the same way, these are not always comparable to measures used by other companies. The definition and relevance of key figures not calculated according to IFRS are set-out in the table below.

Key figure	Definition	Relevance
Operating profit/loss	Profit/loss before financial items and tax.	The operating profit/loss is used to measure the profit/loss generated by the operating activities.
Operating margin	Operating profit/loss as a proportion of revenue.	The operating margin shows the proportion of revenue that remains as profit before financial items and taxes and has been included to allow investors to get an impression of the company's profitability.
Liquidity ratio	Current assets divided by current liabilities.	Liquidity ratio has been included to show the Company's short-term payment ability.
Equity ratio	Shareholders' equity as a proportion of total assets.	The equity ratio shows the proportion of total assets covered by equity and provides an indication of the company's financial stability and ability to survive in the long term.
Average number of employees	Average number of employees employed during the period.	This key figure may explain part of the development in personnel expenses and has been included to provide an impression of how the number of employees at the company has developed.
Equity per share	Equity divided by the shares outstanding at the end of the period.	Equity per share has been included to provide investors with information about the equity reported in the balance sheet as represented by one share.
Cash flow per share	Cash flow for the period divided by the average shares outstanding for the period.	Cash flow per share has been included to provide investors with information about the cash flow represented by one share during the period.

Revenues and result of the operation

Revenue

Total revenues during the second quarter of 2019 was SEK 0.7 million (3.8).

Total revenues during the first six months of 2019 was SEK 2.4 million (8.1).

In 2019, revenues comprised research funding under the agreement with Boehringer Ingelheim. In 2018, revenues comprised research funding under the agreements with Boehringer Ingelheim and BenevolentAI.

Operating profit/loss

The operating loss for the second quarter was SEK 20.6 million (24.1). The company recognized operating expenses of SEK 21.3 million (27.9) for the second quarter of 2019. External expenses amounted to SEK 13.3 million (20.1) and personnel costs amounted to SEK 6.6 million (6.6). In the second quarter of 2019, as well as the second quarter 2018, external expenses comprised primarily development costs in relation to Tesomet followed by preclinical development costs in relation to SAN711 and research and development costs in relation to the IK program.

The company recognized an operating loss of SEK 49.7 million (39.9) for the first six months of 2019. The company recognized operating expenses of SEK 52.1 million (48.0) whereof external expenses amounted to SEK 35.6 million (33.3) and personnel costs amounted to SEK 13.7 million (12.5). In both 2019 and 2018, external expenses comprised primarily development costs in relation to Tesomet followed by preclinical development costs in relation to SAN711 and research and development costs in relation to the IK program.

Cash flow

Operating cash flow for the second quarter of 2019 was an outflow of SEK 27.3 million (outflow of 19.0). Consolidated cash flow for the second quarter of 2019 was an outflow of SEK 21.2 million (outflow of 6.9).

Operating cash flow for the first 6 months of 2019 was an outflow of SEK 52.8 million (outflow of 34.3). Consolidated cash flow for the first 6 months of 2019 was an outflow of SEK 29.2 million (inflow of 4.6).

In 2019, the operating cash flow for the first six months is explained by the operating loss. The consolidated cash flow in 2019 is further explained by an inflow from finance activities of SEK 23.2 million through the issue of convertible loan notes to Nice & Green totaling SEK 24 million of which SEK 4.5 million has not been converted at the balance sheet date. The balance of SEK 19.5 million was converted into equity the first six months of 2019

and the net proceeds of SEK 18.7 million is recorded under new share issues after deduction of issuing expenses.

In 2018, the operating cash flow for the first six months is explained by the operating loss during the period and the improvement in working capital primarily due to an increase in trade payables and accrued expenses following increased development activities in 2018. The consolidated cash flow during the first six months is explained by an inflow from finance activities of SEK 29.4 million through the issue of convertible loan notes to Nice & Green totaling SEK 30 million of which SEK 12 million has not been converted at the balance sheet date. The balance of SEK 18 million was converted into equity during the first six months and is recorded under new share issues after deduction of issuing expenses.

Financial position

The equity ratio was 53 (48) % as of June 30, 2019, and equity was SEK 69.1 million (24.4). Cash and cash equivalents amounted to SEK 30.2 million (18.3) as of June 30, 2019. Total assets as of June 30, 2019, were SEK 77.7 million (51.1).

The share, share capital and ownership structure

At June 30, 2019, the number of shares outstanding amounted to 24,066,238 (22,446,347). The company established a warrant program on July 1, 2015, totaling 64,000 warrants, on July 1, 2017, totaling 38,500 warrants, on January 19, 2018 totaling 286,003 warrants and on July 1, 2018, totaling 45,013 warrants. See note 4 for further information about share based payments after the rights issue.

At June 30, 2019, the company had 5,592 (5,331) shareholders excluding holdings in life insurance and foreign custody account holders.

In May 2019, it was resolved to perform a rights issue, that was completed after the end of the quarter, see note 11. The shares were registered after the balance sheet date. Through the rights issue the Company's share capital increases by SEK 184,855.45, to a total of SEK 1,388,167.35 and the number of shares increased by 3,697,109 to a total of 27,763,347 in July 2019.

Personnel

As of June 30, the number of employees was 24 (25) of which 13 (13) are women. Of these employees, 3 (3) are part-time employees and 21 (22) are full-time employees, and a total of 19 (20) work in the company's research and development operations. 11 (12) of Saniona's employees hold PhDs, 2 (2) hold university degrees, 8 (8) have laboratory training and the remaining 3 (3) have other degrees.

Operational risks and uncertainties

All business operations involve risk. Managed risk-taking is necessary to maintain good profitability. Risk may be due to events in the external environment and may affect a certain industry or market. Risk may also be company specific.

The main risks and uncertainties which Saniona is exposed to are related to drug development, the company's collaboration agreements, competition, technology development, patent, regulatory requirements, capital requirements and currencies.

The Group's programs are sold primarily to pharmaceutical companies and spin-outs funded by pharmaceutical companies and venture capital firms. Historically, the Group has not sustained any losses on trade receivables and other receivables.

Currency risks is the risk that the fair value of future cash flows fluctuate because of changed exchange rates. Exposure to currency risk is primarily sourced from payment flows in foreign currency and from the translation of balance sheet items in foreign currency, as well as upon the translation of foreign subsidiaries' income statements and balance sheets to the Group's reporting currency, which is SEK.

A more detailed description of the Group's risk exposure and risk management is included in Saniona's 2018 Annual Report. There are no major changes in the Group's risk exposure and risk management in 2019.

Audit review

This Interim Report has not been subject to review by the company's auditors.

Notes

Note 1 General Information

Saniona AB (publ), Corporate Registration Number 556962-5345, the Parent Company and its subsidiaries, collectively the Group, is a publicly listed research and development company focused on drugs for diseases of the central nervous system, autoimmune diseases, metabolic diseases and treatment of pain. The Parent Company is a limited liability company registered in the municipality of Malmö in the county of Skåne, Sweden. The address of the head office is Baltorpvej 154, DK-2750 Ballerup, Denmark. Saniona is listed at Nasdaq Stockholm Small Cap. The Parent Company's share is traded under the ticker SANION and the ISIN code SE0005794617.

Note 2 Significant accounting policies

The interim report has been prepared in accordance with IAS 34 Interim reporting. The Group applies the International Financial Reporting Standards (IFRS) and interpretations of IFRS IC as adopted by the EU, the Annual Accounts Act and the Financial Reporting Board's recommendation RFR 1, Supplementary Accounting Rules for Groups.

The condensed consolidated financial statements have been prepared under the historical cost convention, except in the case of certain financial assets and liabilities, which are measured at fair value. The condensed consolidated financial statements are presented in Swedish kronor (SEK) which is also the functional currency of the Parent Company.

The applied accounting principles are in accordance with those described in the Annual Report for 2018. More detailed information about the Group's and the Parent Company's accounting and valuation principles can be found in the Annual Report for 2018, which is available on www.saniona.com.

Disclosures in accordance with IAS 34 Interim Financial Reporting are presented either in the notes or elsewhere in the interim report.

Effects of new accounting policies

IFRS 16 Leasing

IFRS 16 Leasing entered into force on January 1, 2019. Saniona has used the modified retrospective method allowed under IFRS 16, valuing the lease liability at the net present value of the future payments under the lease term. The corresponding right of use asset has been valued at an amount equal to the lease liability as allowed under IFRS 16 transition rules. Please refer to table below for a specification of the amounts recognized under initial recognition of IFRS 16.

KSEK	Figures before IFRS 16 2019-01-01	IFRS 16 adjustments	Adjusted figures 2019-01-01
Assets			
Tangible assets	-	4,233	4,233
Total	0	4,233	4,233
Liabilities			
Lease liabilities, long-term	-	2,901	2,901
Lease liabilities, short-term	-	1,332	1,332
Total	0	4,233	4,233

Apart from rental agreements in relation to the company's premises as described above, the company has no other lease commitments as of June 30, 2019. Given the insignificance of the effect of IFRS 16, the company will present new accounting principles for leasing in the Financial Statement for 2019.

Note 3 Segment reporting

The Group is managed as a single business unit. The basis for identifying reportable segments is the internal reporting as reported to and followed up by the highest executive decision maker. The Group has identified the highest executive decision maker as the CEO. The internal management and reporting structure comprises only one business unit, and the Group therefore has only one operating segment, for which reason no segment information is provided.

Note 4 Share based payments

Share-based compensation expenses for the Q2 2019 totaled SEK 235 (134) thousand. The Group accounts for share-based compensation by recognizing compensation expenses related to share-based instruments granted to the board, management, employees and consultants in the income statement. Such compensation expenses represent the fair market values of warrants granted and do not represent actual cash expenditures.

	Options granted in 2015	Options granted in 2017	Options granted in 2018	Total
Share-based payment				
Outstanding at 1 January 2019	64,000	38,292	331,016	433,308
Granted during the period	-	-	-	-
Forfeited during the period	-	-	1,708	1,708
Outstanding at 30 June 2019	64,000	38,292	329,308	431,600

If all issued warrants are exercised for subscription of new shares, the Parent Company's will issue a total of 431,600 new shares corresponding to a dilution of approximately 1.76% (before the rights issue). The data below has been used for the calculation.

Incentive program	2015	2017	2018:1	2018:2	2018:3
Allotted options	64,000	38,750	286,003	34,500	10,513

Risk-free interest rate during the life of the option	0.2257%	-0.0584%	0.2389%	-0.0713%	-0.0713%
Assumed volatility*	91.29%	76.75%	57.41%	63.58%	63.58%
Expected dividends	0	0	0	0	0

Incentive program after rights issue**	2015	2017	2018:1	2018:2	2018:3
Allotted options	64,000	38,750	286,003	34,500	10,513
Subscriptions price after rights issue (SEK)	20.51	40.71	33.26	29.77	29.77
Equal to no of shares	65,280	39,525	291,723	35,190	10,723

* In 2015 and 2017, the volatility equals the historical volatility for the longest period where trading activity is available (for the period since listing at the Spotlight Stock Market on April 22, 2014 to date of grant). In 2018, the volatility equals a twelve-month period.

** The subscription price for the options and the number of shares that each option entitles to subscription of have been recalculated as a result of the rights issue.

A detailed description of the warrant program in 2015, 2017, 2018:1, 2018:2 and 2018:3 can be found in the annual report 2018.

The 2019 Annual General Meeting voted in favor of establishing an employee incentive program involving the allotment of a maximum of 34,500 options free of charge to certain employees and consultants of the Group and an incentive program involving the allotment of a maximum of 12,000 options free of charge to certain members of the board of directors of the Group. Allotment shall take place no later than September 15, 2019.

Note 5 Income tax and deferred tax subsidiaries in Denmark

Tax on income for the year, consisting of the year's current tax and deferred tax, is recognized in the income statement to the extent that it relates to the income or loss for the period and in other comprehensive income or equity to the extent that it relates thereto.

The Group recognized a tax income of SEK 7.7 (7.0) thousand during the first half of 2019. This amount has been recognized under non-current tax assets in accordance to the accounting policies described below.

Under the Danish R&D tax credit scheme (Skattekreditordningen), loss-making R&D entities can obtain a tax credit which is equal to the tax value of the incurred research and development expenses. The tax credit is payable in November in the following financial year. In 2018 and 2019 the R&D expense tax-base is capped to DKK 25 million equal to a tax credit of DKK 5.5 million at a tax rate of 22%. Research and development tax-credits under the Danish R&D tax credit scheme is recognized in the income statement to the extent that it relates to the research and development expenses for the period and Saniona expects to fulfil the requirement for tax credit for the year. The tax credit under the Danish R&D tax credit scheme is recognized in the balance sheet under current tax assets if payable within 12 months and under non-current tax assets if payable after 12 months. As of June 30, 2019, the Group had SEK 7.8 million (SEK 7.7 million) in current tax asset, which will be payable in November 2019 and SEK 7.8 million (SEK 7.3 million) in non-current tax assets which will be payable in November 2020.

Note 6 Pledged assets and contingent liabilities

The Parent Company has provided a guarantee to the subsidiary Saniona A/S to ensure that Saniona A/S will be able to pay its creditors as the obligations fall due for the period until June 30, 2020. Saniona A/S had no external net debt as of June 30, 2019.

Note 7 Related parties

Related parties comprise the Group's Executive Management, Board of Directors and companies within the Group. Apart from intercompany transaction and board fees as well as remuneration of management in accordance to the remuneration policy as resolved at the annual general meeting, there has been no transaction with related parties during 2018 and 2019.

Note 8 Investment in associated companies

On May 3, 2017, Saniona participated in formation of a new company, Scandion Oncology A/S. Scandion Oncology has been listed on the Spotlight Stock Market on November 8, 2018, after having raised SEK 26 million in an IPO at a pre-money valuation of SEK 43.7 million. The decrease in equity for Q2 2019 has been recorded in the statement of income under Share of result of associates with SEK 0.7 million.

Scandion Oncology A/S	Equity*	Saniona's share of net profit/(loss) (ownership 29.17%)
January 1, 2019*	22,300,870	6,505,164
June 30, 2019**	14,831,046	4,326,216
		(2,178,948)

* The calculation of equity is based on Scandion Oncology's interim report Q3 2018 and the capital increase in Q4 2018.

** The calculation of equity is based on Scandion Oncology's Q1 report 2019.

Note 9 Other long-term receivables

On July 4, 2017, Saniona acquired NeuroSearch's remaining interest in the preclinical and clinical assets, which Saniona acquired from NeuroSearch during the period 2012-2016. According to the previous agreements, Saniona was obliged to pay NeuroSearch a milestone payment of EUR 400,000 when the first preclinical program was tested in humans. In addition, Saniona was obliged to pay royalties on its product sales or a percentage of its licensing income in relation to the acquired clinical assets including the clinical development compounds, tesofensine and NS2359. According to the new agreement, Saniona has paid NeuroSearch a onetime cash payment of DKK 5.5 million. Following this, Saniona has no additional payment obligations to NeuroSearch. Saniona estimates that the onetime cash payment of DKK 5.5 million would have been payable to NeuroSearch within a four-year period under the previous agreements. Therefore, the amount will be expensed over a four-year period starting July 1, 2017. In 2019 the onetime cash payment has been expensed with SEK 1.0 million (SEK 0.9 million) and as June 30, 2019, the recorded value of the asset is SEK 3.9 (SEK 4.8 million).

Note 10 Convertible loan

Saniona entered into a convertible notes funding agreement with Nice & Green S.A on December 29, 2017. Under the terms of the agreement, Nice & Green has committed to subscribe up to SEK 72 million in convertible notes in 12 individual tranches of SEK 6 million each over a 12-month period subject to prolongation by Saniona. Saniona has extended the convertible notes funding agreement with Nice & Green for an additional SEK 72 million with the same terms, totaling SEK 144 million.

The convertible notes will bear no interest and will mature 12 months from the date issued. Unless an event of default occurs, the non-converted convertible notes will be converted to shares or reimbursed in cash at Saniona's discretion at the maturity date. Nice & Green will have the right to request conversion of the convertible notes at any time during a period of 12 months following the issue of the respective tranche. To the extent Nice & Green has not requested conversion at the end of the respective conversion period, Saniona will have the right to request conversion. The pricing of the shares will be determined as 92% of the lowest daily volume-weighted average share price (VWAP) of the five trading days prior to the date on which Nice & Green has sent a conversion notice to Saniona. Upon each request for conversion, Saniona has the right to instead of effectuating conversion, pay a cash amount to Nice & Green. The cash amount to be paid in case Saniona utilizes this right, will be calculated as $V/0.97$ where V is the nominal amount of the convertible note for which Saniona chooses to effect cash payment. For further details, please see Saniona's press release dated December 29, 2017.

In the first 6 month of 2019, Saniona has drawn four tranches totaling SEK 24 million (SEK 30 million) of which SEK 19.5 million (SEK 18 million) has been converted to shares by Nice & Green as of June 30, 2019. The converted amount of SEK 19.5 million is taken to equity after deducting expenses relating to capital increase totaling KSEK 816 (KSEK 619).

Note 11 New share issue

A resolved but not completed share issue of SEK 53.7 million, with transaction costs deducted, is declared in the Group's balance sheet as "Other receivables" under Assets and as "Additional paid in capital" under Equity. For the parent company, the corresponding item is declared as "Subscribed capital unpaid" under Assets, and as "Share capital to be paid in (new share issue)" and "Additional paid in capital" under Equity.

Business terms - glossary

Alzheimer's disease

A chronic neurodegenerative disease that usually starts slowly and gets worse over time and accounts for 60% to 70% of cases of dementia. As the disease advances, symptoms can include problems with language, disorientation (including easily getting lost), mood swings, loss of motivation, not managing self-care, and behavioral issues. Gradually, body functions are lost, ultimately leading to death. The cause for most Alzheimer's cases is still mostly unknown except for 1% to 5% of cases where genetic differences have been identified. Several competing hypotheses exist trying to explain the cause of the disease.

Ataxia

A neurological sign consisting of lack of voluntary coordination of muscle movements. Ataxia is a non-specific clinical manifestation implying dysfunction of the parts of the nervous system that coordinate movement, such as the cerebellum. Several possible causes exist for these patterns of neurological dysfunction and they can be mild and short term or be symptoms of severe chronic diseases such as Friedreich's ataxia, which is an autosomal recessive inherited disease that causes progressive damage to the nervous system which manifests in initial symptoms of poor coordination that progresses until a wheelchair is required for mobility.

BenevolentAI acquired Proximagen Ltd. in Q1 2017.

Boehringer Ingelheim

Boehringer Ingelheim GmbH. For further details, please see the Boehringer Program in the Pipeline section.

Cadent Therapeutics

Cadent Therapeutics was established in March 2017 through a merger between Saniona's spin-out company, Ataxion, and Luc Therapeutics.

Chronic itching

Chronic itching (also known as pruritus) is defined as an unpleasant sensation that provokes the desire to scratch. Prolonged itching and scratching may increase the intensity of the itch and lead to skin injury, infection and scarring. The possible causes are numerous and include dry skin, skin disorders such as eczema and psoriasis, infections such as chicken pox and scabies, underlying illness such liver disease, kidney failure and cancers, nerve disorders such as multiple sclerosis and diabetes mellitus, and allergic diseases including allergic reactions to medications such as antibiotics and chemotherapy. For some patients, there's no known cause. Chronic itching ranges in intensity from a mild annoyance to a disabling condition. The constant need to scratch can be as debilitating as chronic pain. Depending on the underlying cause, the current treatment options include moisturizing cream, antihistamines, corticosteroids, local anesthetics, calcineurin inhibitors and antidepressants. Many patients experience only a partial relief whereas others have no relief from existing treatment options.

CNS

Central Nervous System, a part of the nervous system consisting of the brain and spinal cord.

Cocaine addiction

The compulsive craving for use of cocaine despite adverse consequences.

Colitis

An inflammation of the inner lining of the colon. There are numerous causes of colitis including infection, inflammatory bowel disease (Crohn's disease, ulcerative colitis), ischemic colitis, allergic reactions, and microscopic colitis. Symptoms depend upon the cause and may include abdominal pain, cramping and diarrhea.

Crohn's disease

An IBD which causes inflammation of the digestive tract, which can lead to abdominal pain, severe diarrhea, fatigue, weight loss and malnutrition. Inflammation caused by Crohn's disease can involve different areas of the digestive tract in different people.

CTA

Clinical Trial Application which a pharmaceutical company file to EMA to obtain permission to ship and test an experimental drug in Europe before a marketing application for the drug has been approved. The approved application is called an Investigational New Drug (IND) in the US.

EMA

European Medicines Agency

Epilepsy

Epilepsy is a central nervous system (neurological) disorder in which brain activity becomes abnormal, causing seizures or periods of unusual behavior, sensations, and sometimes loss of awareness. Treatment with medications or sometimes surgery can control seizures for the majority of people with epilepsy. Some people require lifelong treatment to control seizures, but for others, the seizures eventually go away.

Essential tremor

Essential tremor is the most common movement disorder with a prevalence of 4% in persons age 40 and older and considerably higher among persons in their 60s, 70s, 80s and 90s. It typically involves a tremor of the arms, hands or fingers but sometimes involving the head, vocal cords or other body parts during voluntary movements such as eating and writing. Although essential tremor is often mild, people with severe tremor have difficulty performing many of their routine activities of daily living.

Fatty liver disease (NASH)

Nonalcoholic steatohepatitis (NASH), or fatty liver disease, is a form of nonalcoholic fatty liver disease (NAFLD) in which a patient has hepatitis - inflammation of the liver - and liver cell damage, in addition to fat in the liver. Inflammation and liver cell damage can cause fibrosis, or scarring, of the liver. NASH may lead to cirrhosis or liver cancer.

FDA

US Food and Drug Administration

GABA-A α 2/ α 3 program

A small molecule program which is designed to positively modulate (PAM) GABA-A α 2 and GABA-A α 3 ion channels, which are expressed in various central and peripheral neurons and are believed to be key mediator in the control of pain signaling and the control of anxiety.

Hypothalamic obesity (HO)

A common sequel to tumors of the hypothalamic region and their treatment with surgery and radiotherapy. Weight gain results from damage to the ventromedial hypothalamus which leads, variously, to hyperphagia, a low metabolic rate, autonomic imbalance, growth hormone deficiency and various other problems that contribute to weight gain.

IK program

A small molecule program which is designed to inhibit IK channels, which are expressed by immune cells and believed to be key mediator of inflammation in auto inflammatory diseases such as inflammatory bowel diseases.

IND

Investigational New Drug is a program by which a pharmaceutical company obtains permission to ship and test an experimental drug in the U.S. before a marketing application for the drug has been approved. In Europe, the application is called a Clinical Trial Application (CTA).

Inflammatory bowel disease (IBD)

IBD is an umbrella term used to describe disorders that involve chronic inflammation of the digestive tract. Types of IBD include ulcerative colitis and Crohn's disease.

Ion channel

Channels or pores in cell membranes which is made up of unique protein classes. Ion channels controls muscles and nerves and are central to the function of the body by governing the passage of charged ions across cell membranes.

Ion channel modulators

A drug which modulates the function of ion channels by blocking or opening ion channels or by decreasing or increasing throughput of ion channels. Agonists opens ion channels, Antagonists blocks ion channels, PAMs

(Positive Allosteric Modulators) increase throughput whereas NAMs (Negative Allosteric Modulators) decrease throughput of ion channels.

Kv7 programs

Saniona's Kv7 programs focus on developing effective new treatments for neurological diseases, such as treatment-resistant partial epilepsy, and various pain disorders. Furthermore, we have demonstrated that activators of the Kv7 family of potassium channels are also highly efficacious for relaxation of overactive bladder smooth muscle cells, a characteristic of urinary incontinence (UI).

Major Depressive Disorders

A mental disorder characterized by a pervasive and persistent low mood that is accompanied by low self-esteem and by a loss of interest or pleasure in normally enjoyable activities.

Medix

Productos Medix, S.A de S.V. For further details, please see under tesofensine in the Pipeline section.

Metoprolol

Metoprolol is a medication of the selective β_1 receptor blocker type, which work by blocking the neurotransmitter norepinephrine and epinephrine from binding to receptors. It is used to treat high blood pressure, chest pain due to poor blood flow to the heart, and a number of conditions involving an abnormally fast heart rate. It is also used to prevent further heart problems after myocardial infarction and to prevent headaches in those with migraines.

Multiple sclerosis

A demyelinating disease in which the insulating covers of nerve cells in the brain and spinal cord are damaged by the immune system. This damage disrupts the ability of parts of the nervous system to communicate, resulting in a wide range of signs and symptoms including physical, mental, and sometimes psychiatric problems.

Neuropathic pain

Pain caused by damage or disease affecting the somatosensory nervous system. Central neuropathic pain is found in spinal cord injury, multiple sclerosis, and some strokes. Aside from diabetes (diabetic neuropathy) and other metabolic conditions, the common causes of painful peripheral neuropathies are herpes zoster infection, HIV-related neuropathies, nutritional deficiencies, toxins, remote manifestations of malignancies, immune mediated disorders and physical trauma to a nerve trunk. Neuropathic pain is also common in cancer as a direct result of cancer on peripheral nerves (*e.g.*, compression by a tumor), or as a side effect of chemotherapy, radiation injury or surgery. Neuropathic pain is often chronic and very difficult to manage with some 40-60% of people achieving only partial relief.

Nic α_6 program

The Nic α_6 program is a small molecule program designed to positively modulate (PAM) the α_6 ion channels. The α_6 subtype exhibits an extremely localized expression mainly confined to dopaminergic neurons in the area of the brain affected in Parkinson's disease patients, where they act as important regulators of dopamine signaling.

NS2359

A triple monoamine reuptake inhibitor, which blocks the reuptake of dopamine, norepinephrine, and serotonin in a similar manner to cocaine. However, NS2359 dissociates slowly from these transporters and has a long human half-life (up to 10 days) which makes frequent dosing unnecessary. NS2359's pharmacological profile means that it may be able to reduce cocaine withdrawal symptoms, reduce cocaine craving and reduce cocaine-induced euphoria. In preclinical trials, NS2359 has been shown to reduce the reinforcing effects of cocaine and may have effects on cue induced drug craving. Furthermore, human trials with NS2359 have shown that NS2359 has little or no abuse potential and does not have adverse interactions with cocaine.

Obesity

A medical condition in which body fat has accumulated to an extent that it may have a negative effect on health. Obesity is most commonly caused by a combination of excessive food intake, lack of physical activity and genetic susceptibility. A few cases are caused primarily by genes, endocrine disorders, medications or mental disorder.

Parkinson's disease

Parkinson's disease (PD) is a neurodegenerative disorder that affects predominately dopamine-producing neurons in a specific area of the brain called substantia nigra. Symptoms generally develop slowly over years and may include tremors, bradykinesia, limb rigidity and gait and balance problems. The cause remains largely unknown and there is still no cure.

Pharmacodynamics (PD)

Pharmacodynamics is the study of the biochemical and physiologic effects of a drug in the body including the relationship between the drug concentration and the desirable effects as well as the undesirable effects.

Pharmacokinetics (PK)

Pharmacokinetics is the study of how the body affects a drug including the relationship between the dosed amount of a drug and the obtained blood concentration of the drug.

Prader-Willi syndrome (PWS)

Prader-Willi syndrome is a complex genetic condition that affects many parts of the body. In infancy, this condition is characterized by weak muscle tone (hypotonia), feeding difficulties, poor growth, and delayed development. Affected individuals develop an insatiable appetite, which leads to chronic overeating (hyperphagia) and obesity. Some people with Prader-Willi syndrome, particularly those with obesity, also develop type 2 diabetes.

SAN711

SAN711 is a selective GABAA $\alpha 3$ modulator (PAM), which increases the activity of the GABAA receptor protein in the vertebrate central nervous system. It is derived from Saniona's advanced ion channel platform and has demonstrated strong efficacy in rodent itching and pain models. SAN711 is ready for Phase 1 clinical testing.

SAN903

SAN903 is a selective IK channel modulator, which inhibits the potassium outflux from cells through the IK channels, which are expressed by immune cells and believed to be key mediator of inflammation in auto inflammatory diseases such as inflammatory bowel diseases.

Schizophrenia

A mental disorder often characterized by abnormal social behavior and failure to recognize what is real. Common symptoms include false beliefs, unclear or confused thinking, auditory hallucinations, reduced social engagement and emotional expression, and lack of motivation.

Tesofensine

A triple monoamine reuptake inhibitor, which is positioned for obesity and type 2 diabetes, two of the major global health problems. Tesofensine has been evaluated in Phase 1 and Phase 2 human clinical studies with the aim of investigating treatment potential with regards to obesity, Alzheimer's disease and Parkinson's disease. Tesofensine demonstrated strong weight reducing effects in Phase 2 clinical studies in obese patients.

TRC

The University of Pennsylvania Treatment Research Center. For further details, please see under NS2359 in the Pipeline section.

Type 2 diabetes

A metabolic disorder that is characterized by hyperglycemia (high blood sugar) in the context of insulin resistance and relative lack of insulin. This contrasts with diabetes mellitus type 1, in which there is an absolute lack of insulin due to breakdown of islet cells in the pancreas. The classic symptoms are excess thirst, frequent urination, and constant hunger. Type 2 diabetes makes up about 90% of cases of diabetes, with the other 10% due primarily to diabetes mellitus type 1 and gestational diabetes. Obesity is thought to be the primary cause of type 2 diabetes in people who are genetically predisposed to the disease.

Urinary incontinence (UI)

UI, or the loss of bladder control, is a common and often embarrassing problem. It is not a disease, but rather a symptom of many conditions. Many factors increase risk, for example aging, pregnancy, prostate problems and obesity.
